Conserve and save

When the heat goes up outside, your house works harder to maintain that comfy 72° inside.

Use these tips to help manage that extra energy use and reduce your monthly bill:

- Close curtains between noon-2 p.m. on hot days
- Turn up your thermostat while away
- Turn off ceiling fans when you leave the room
- Turn off lights when not in use

Hot dogs are for barbecues

Keep loved ones of all shapes and sizes safe during hot summer months.

If you can't take your pets inside with you, leave them home for the trip, and always check for extra passengers before exiting the vehicle!
