

Liberty Utilities®

Improved Reliability and Wildlife Protection

Soon, Liberty Utilities contractors will install a protective wildlife cover on the pole that connects the electric service line to your home.

In order to do this safely, crews must briefly shut off your electricity and turn it back on after the installation is completed. Liberty Utilities contractors will attempt to notify you if you are at home before an electric service interruption takes place.

This protective cover was designed to:

- Reduce electrical outages caused by wildlife
- Prevent harm to wildlife caused by contact with electrical equipment
- Increase service reliability and customer satisfaction

If you have questions about this installation, please visit our website at www.libertyutilities.com or call us at 1-800-206-2300.
