

Take control of your bills

Get started with these saving tips

We want to help you save. A few small steps could add up to big savings.

Look for leaks - Leaks are sneaky and can waste a lot of water over a short period of time, adding up to wasted money. Check faucets, toilets, and showerheads to see if there is opportunity for you to save.

Smart controllers - Smart thermostats, smart appliances, and smart irrigation controllers all use technology to help you save.

Look for EPA labels - When buying appliances, water heaters, electronics, light bulbs, toilets, faucets, showerheads, and more, look for ENERGY STAR® and WaterSense labels. Items with these labels are certified by the EPA to use less and can save you significant money on your utility bills.

Don't worry, he called 811!

Dad may still be upset
though...

Whether it's a big project like a swimming pool or some new shrubs around your yard, make sure you call 811 before you grab the shovel! Your property may contain underground utility lines. Knowing where utility lines are buried can help you avoid injury, service outages (and unhappy neighbors), and costly repairs.

Call 811 a few days prior to digging, and you'll be routed to your local 811 call center. Tell the operator where you'll be digging, what type of work you're doing and when. Within just a few days, local utility companies (like us) will visit your site and mark the location of any underground lines, free of charge.
